**Ekvittestlab LLC – Ukrainian company specializing in the scientific development and industrial production of ELISA kits of the EQUI brand, intended for the diagnosis of infectious, parasitic diseases and allergies by enzyme-linked immunosorbent assay (ELISA)**

A large number of original ideas, creative solutions and biotechnological developments of the Ekvitestlab LLC employees have been implemented into the technology of diagnostic kits

The company's staff has extensive experience in the development and production of tools for *in vitro* diagnostics

The best raw materials and materials that have passed thorough comparative evaluation are used for the production of ELISA kits

Every intermediate component and finished product undergoes a multi-stage control to standardize the characteristics

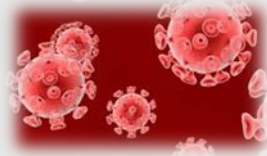

Diagnostic characteristics of ELISA kits meet international standards

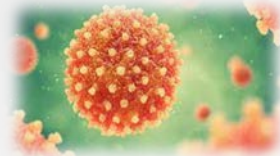

# ELISA kits EQUI

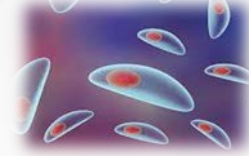

Hepatitis B

Hepatitis C

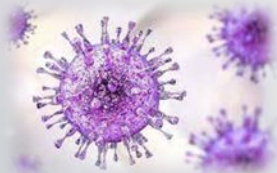

Hepatitis A

Toxoplasmosis

Rubella virus

Cytomegalovirus infection

Measles virus

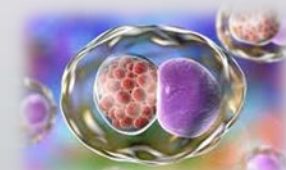

Herpes simplex virus

Epstein-Barr virus

Varicella zoster virus

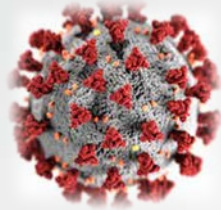

Chlamydia infection

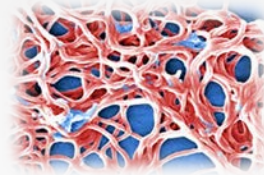

# ELISA kits EQUI

Diphtheria

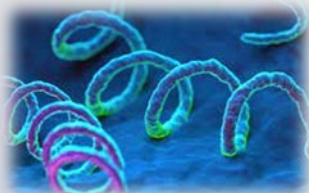

COVID-19

Lyme disease

Allergy

Syphilis

Trichomoniasis

Ureaplasmosis

Gastrointestinal infections

Urogenital mycoplasmosis and mycoplasmal pneumonia

Parasitic infection

# Advantages of ELISA kits EQUI

The analysis procedure is designed for manual production and automatic enzyme-linked immunosorbent assay "open" type

Color indication at all stages of the analysis to ensure visual control of reagent application (minimizes laboratory error)

Detachable strip wells and a simple analysis scheme. Reduced analysis time

Ready to use conjugate and TMB solution

Diagnostic and analytical characteristics of ELISA kits are defined and confirmed by commercial standard panels and international WHO standards

Providing service support, specialist advice

The quality assurance system for the production of EQUI brand products meets the requirements of ISO 13485:2016 and recognized by the International Accreditation Forum (IAF)

In July 2021, ELISA kits EQUI for the diagnosis of COVID-19 received the European CE quality mark and are approved for delivery to EU countries

ELISA kits meet the requirements of the Technical Regulation for *in vitro* diagnostic medical devices

In 2019, Ekvitestlab received an award from the independent institute "Ukrainian industry-analytical center" for significant contribution to the development of the region's economy, gaining the right of supremacy in the industry and excellent dynamics of enterprise development, according to NACE 46.46 "Wholesale of pharmaceutical goods"

This award confirms that Ekvitestlab LLC is the best company in the industry according to the register of "Reliable and investment-attractive enterprises of the country"

**Ekvittestlab is a company open to dialogue and cooperation on expanding the range of EQUI brand products and issues related to its application**
