Functionality covers evaluation of the performance of an employee, reporting, fill a contract compatible with online digital signing.

Data communication is ensured between several separate platforms

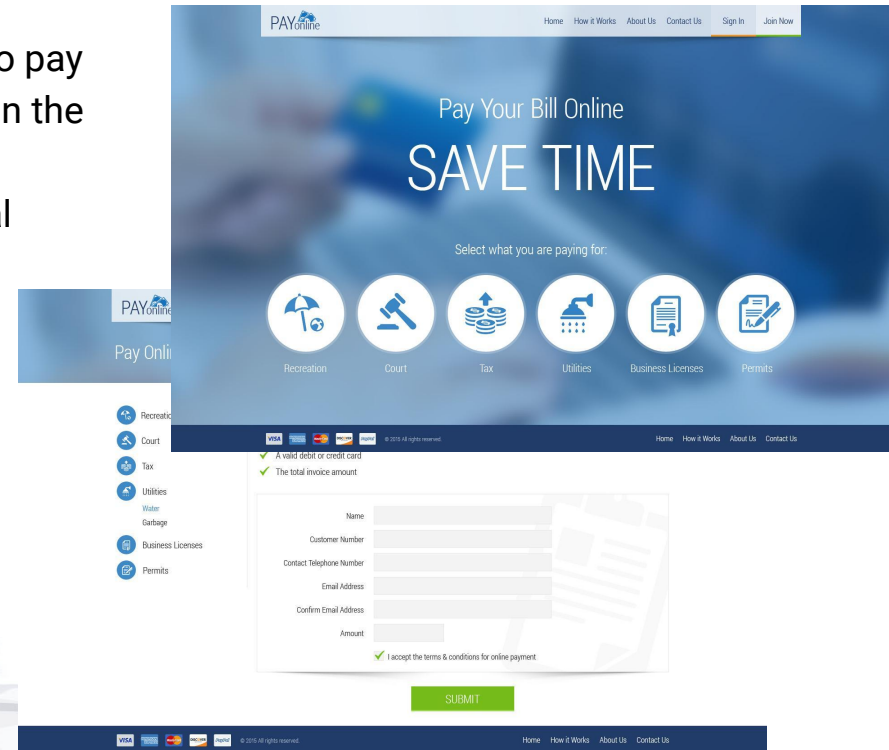

The solution has been created for Denmark Large Clothing-retail company

Payment Terminal

PayOnline is An electronic payment system to pay for penalties, taxes, public utilities etc. Used in the USA. This system provides online tracking of payments, performs notifications and internal control using an identifier.

The core attention has been paid to the data safety in order to provide safety of the system. The system transfers money directly onto the aimed account. Users can pay with various credit cards or cash in a terminal.

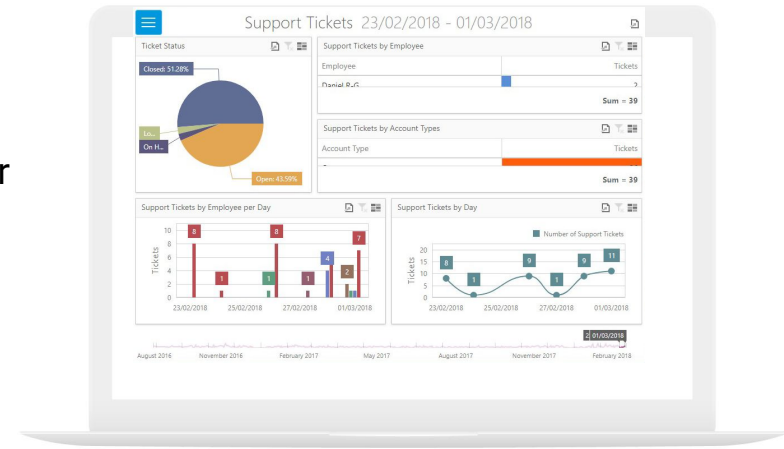

The screenshot displays the PAYonline website interface. At the top, there is a navigation bar with links for Home, How it Works, About Us, Contact Us, Sign In, and Join Now. The main heading reads "Pay Your Bill Online" followed by "SAVE TIME" in large letters. Below this, a section titled "Select what you are paying for:" features six circular icons representing different categories: Recreation (umbrella), Court (gavel), Tax (stack of coins), Utilities (house with rain), Business Licenses (document), and Permits (document with checkmark). A sidebar on the left lists these categories with corresponding icons. The bottom of the page shows a payment form with fields for Name, Customer Number, Contact Telephone Number, Email Address, Confirm Email Address, and Amount. There are two green checkmarks indicating successful validation: "A valid debit or credit card" and "The total invoice amount". A "SUBMIT" button is located at the bottom right of the form area. The footer includes logos for Visa, Mastercard, American Express, and Discover, along with copyright information and navigation links.

CRM and ERP system

Itera Research has really worth attention experience developing bespoke .Net based ERP and CRM solutions that entail wide range of functional modules: calendar, reports, task management system, billing, client managements, licensing, order processing, warehouse management, resource planning, etc.

With the client we've been working for 13 years developing and maintaining his white label complex CRM system for Australian market.

IoT. Micro Mobility. Rent scooters

Mobile app for bike and scooters renting service that provides citizens with the following features:

- Find renting stations on the map;
- Check availability of bikes;
- Rent and drop off bikes;
- Pay for the service, etc.

The solution has been created in 2020 from scratch.

The implementation and deploy in Ukraine and Spain postponed due to the COVID19.

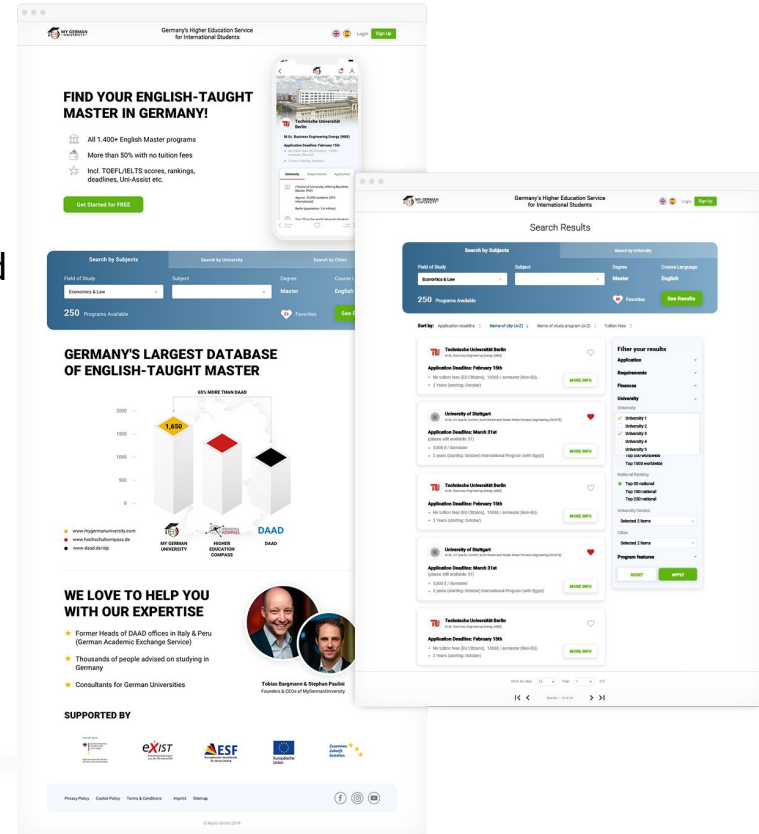

Platform for International Students

MyGermanUniversity.com is Germany's largest database for English-language Masters programs.

It is a web-based multi-language application that helps international students to come to Germany and pursue an academic degree, provides guidelines from finding the right study program, through the application process until arriving in Germany by:

- eligibility check,
- matching tool to find the perfect university,
- counselling sessions.

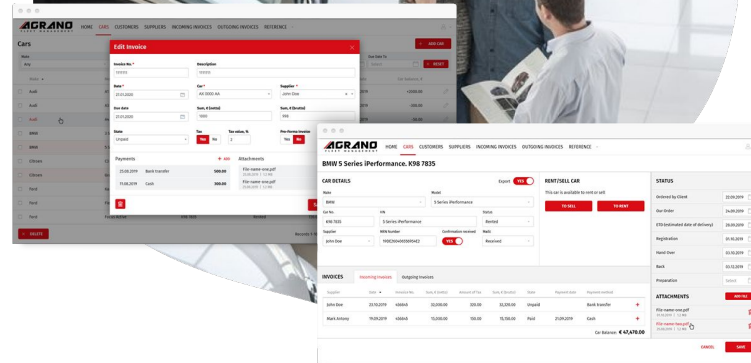

Development has been started in 2018. Since then the project is supported by the Itera team.

Internal Automotive. Car-sharing Service

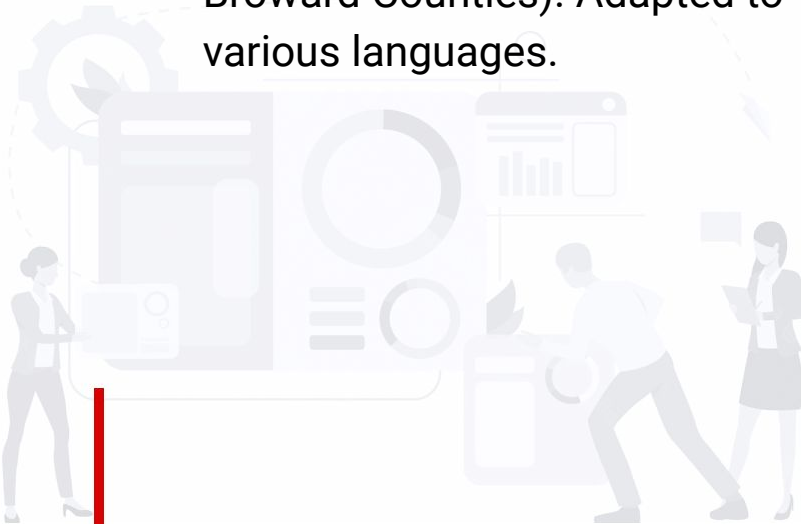

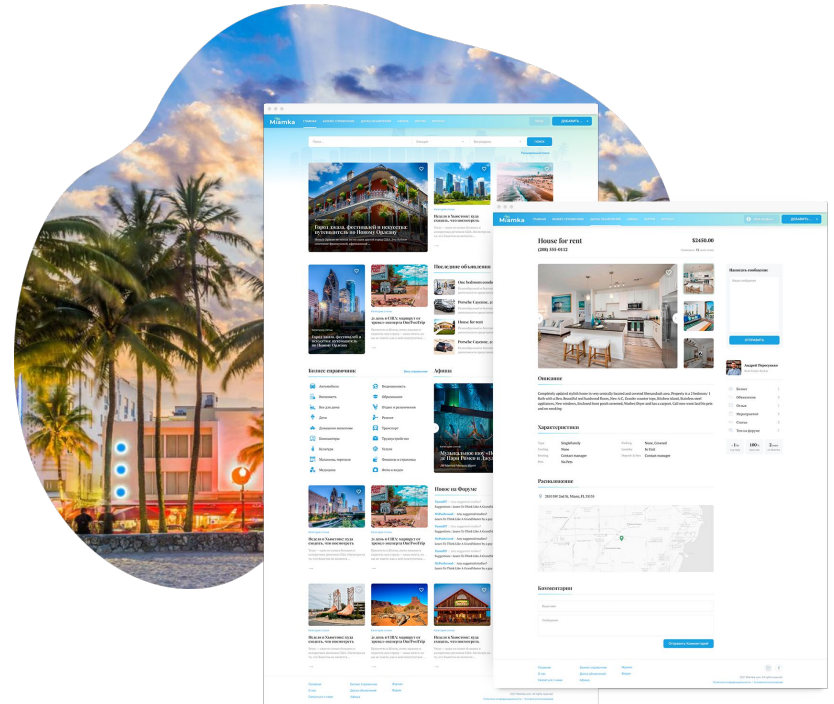

System for internal use for a car rental business.

It tracks the life cycle and operations of each car owned by the company. From the moment of its purchase through all transactions and expenses associated with the lease until the sale.

Listing. Classified. Ad Platform

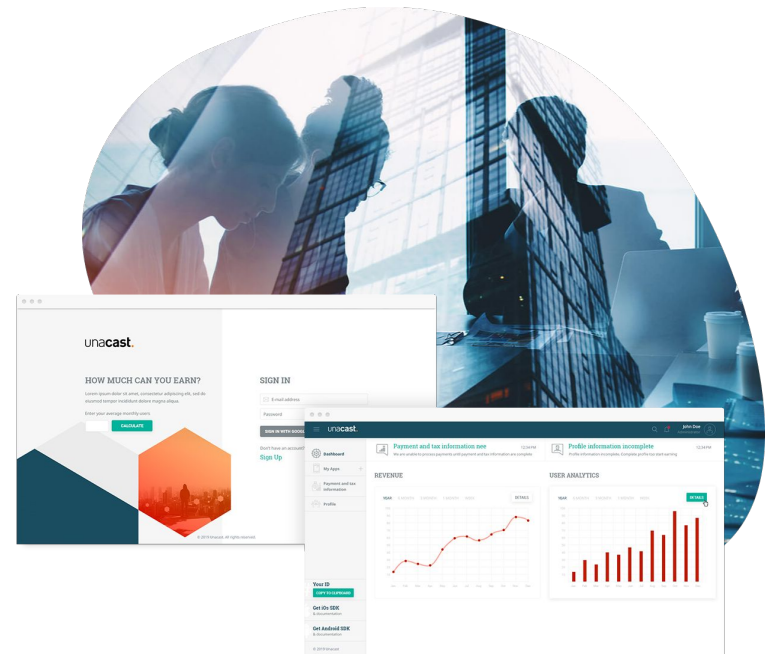

A dedicated classifieds and business listing (advertising) platform for individuals and businesses located in South Florida (Miami-Dade and Broward Counties). Adapted to various languages.

Self Service Portal (SSP) for Partners.

This project is the leading contextual location data platform, who built the Real World Graph® to understand how people and places are connected.

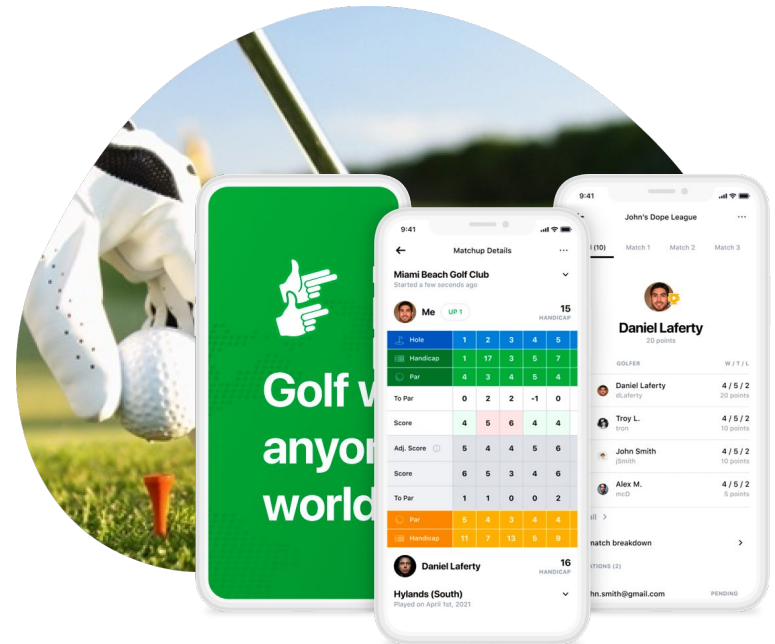

The SSP is created to automate and ease sign up process and verification, to enable reporting and revenue tracking for developers and app companies who use it to monetize their apps.

BigShooter - SportTech. Mobile App

This is an eSport project. Mobile application to allow golf players to play golf with anyone in the world, anytime, anywhere.

The player can play on his own schedule on its own course, compete against friends and strangers across the world on an even footing using Big Shooter's adjustment algorithms. Can get notified when friends are Going Live and follow rounds and league results in real-time, just like fantasy sports.

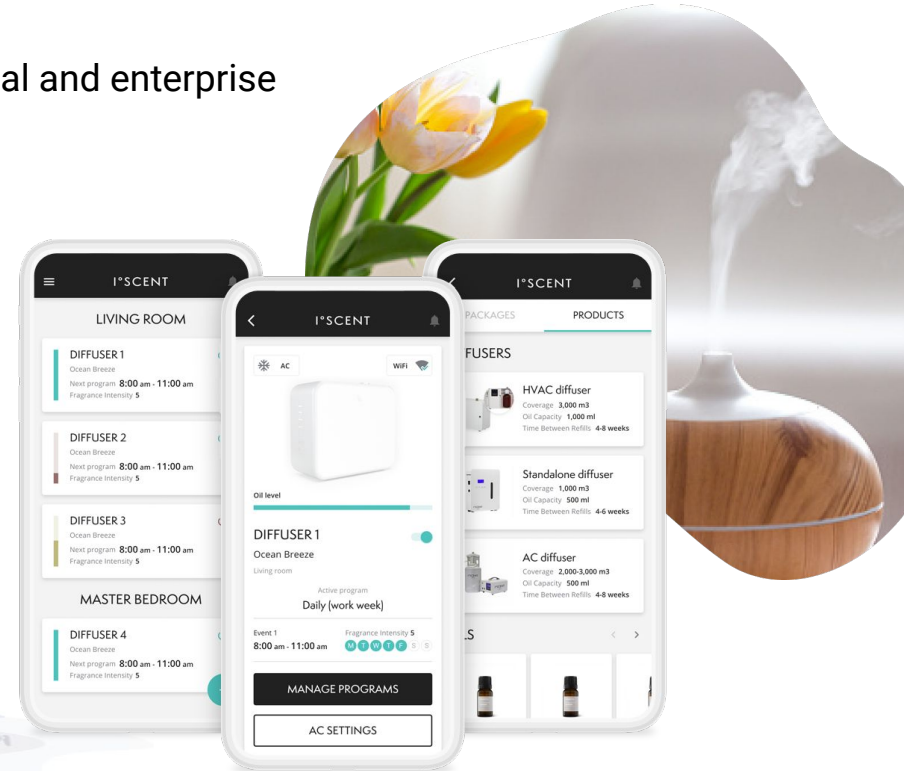

IoT. Smart Aroma Diffuser

A mobile and a web applications for residential and enterprise customers. Apps connects to a Wi-Fi/4G-enabled aroma diffuser.

Features: smart diffuser, device identification via QR code.

Features for users:

- Change remotely settings of devices,
- Manage working programs,
- Turn on/turn off,
- Check the devices' parameters like the oil level, a type of connection, etc.
- Communicate with support, etc.

IoT. Security. Safety. Dispatching System

Dispatching system for a private security company to ensure effective monitoring and rapid response on unauthorized access or entry to the immovable assets.

The web application receives and interprets signals coming from sensors installed in the secured properties. A dispatcher processes the alarm and sends a response group to the location as well as a notification to the property owner. Administrators can manage information about secured assets, clients, response groups, analyze data and generate reports via a dashboard.

3D Real Estate Visualization Platform

Is based on shooting of objects by the Matterport service and our own 3D-modelling. As a result, object (house or apartment) is seen “before” and “after” the renovation in a 3D-tour and is ready to be placed on a RE website.

in other words

It is a service to order creation of a 'knockout' real estate listing by virtual renovation of a property. It delivers ultra-realistic images, 3D virtual tours and detailed floor plans to be used on the MLS.

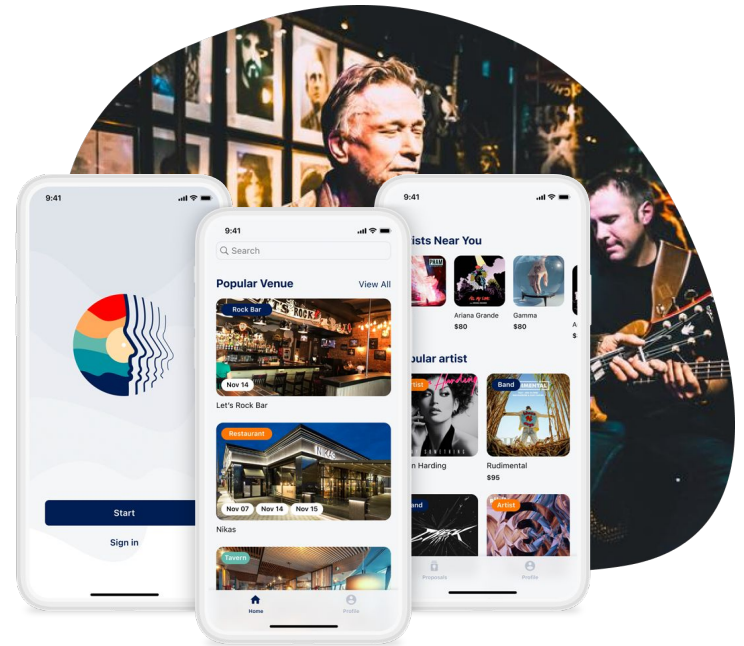

Data from the Matterport or iGuide scan is used to build a 3D model of a property for Virtual Remodeling.

Matching website. Marketplace

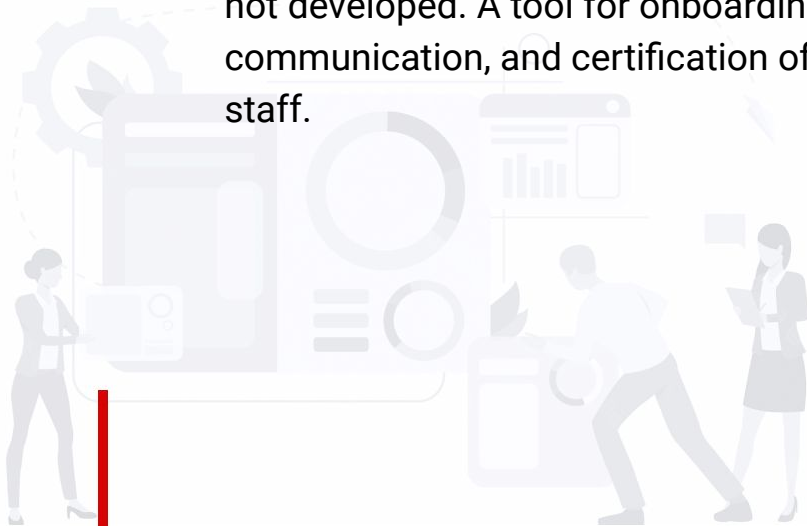

Elvia is a mobile application for Artists and Venues. This is a sort of matching platform.

Artists have their profiles (all information about their music, examples, when they can play, etc.). Venues have their profiles and can search for artists and book them.

Corporate Education. Hotel Knowledge Model

An internal product for a large hotel business Windham. Hotel Knowledge Model, which contains ready-made content and ready-made processes that can be applied and developed where they do not exist or are not developed. A tool for onboarding, training, communication, and certification of the hotel staff.

IoT Solution. Rehabilitation Mobile app.

The idea of the application is to make it possible to carry out rehabilitation of a person after an injury remotely.

Easy-to-use exercise prescription solution allows to create stunning exercise plans for patients quickly.

The application connects via Bluetooth with pants and a jacket.

Clothing sends data to the smartphone. Based on this data, a 3D model of a person is built using Unity. The doctor set up a training schedule and selects the movements necessary for rehabilitation. The application displays the movements of a person in real-time and compares them with the correct ones, which allows you to correct the necessary inclination, angle of rotation, and other nuances of the exercises.
