Company Description:

FLIXHOUSE is specialised in the Development and Production of a new type of modular and mobile system houses.

The Modularity and the Mobility concept means that the sizes of the houses are modular, a lot of the fittings as well and even the houses themselves, if needed, are also mobile.

The product can be adapted to the challenges on the construction site: we can not only change the size of the flat when the number of inhabitants changes, but also for example easily install new entrances and so on, we can easily exchange a room for a bathroom or quickly uninstall technical equipment, when the bathroom is no longer needed.

We produce the houses in a 4.0 fabrication method which is indeed an extreme novelty in the construction business. It is a system in which the elements, parts and units come from a series of different specialized factories and everyone who has some knowledge and adequate muscles can assemble them into a final product, a complete house.

Our second task is to supplement the properties with suitable micromobility. This means that small electric cars, e-bikes and electric scooters of the residents should have a common battery technology that is integrated into the solar system, so that only one universal type is used for the widest possible demand.

Sector: Construction, Micro-mobility (eScooters, e-bikes, electro cars)

Products and Services: the main product is modular system houses supplemented by everything related to the house.

Micro mobility

Typical Clients:

Private customers, commercial clients from the tourist sector

Business Mission of Brandenburg Companies to Estonia (Tallinn and Tartu), 15-19.04.2024

Note for the CCI (to be deleted before posting the profiles online)

He is interested in bringing digitalization into construction sector. He would like to learn from Estonian companies how they use digitalization. Also interested to find talents in Estonia or join the talents.

Possible Estonian counterparts for him would be businesses active in those sectors, local governments responsible for house building, transport concepts (micro-mobility).

In particular, looking for potential partners & companies in the following areas

- Micromobility:

1. producers of ebikes, scooters, incl. their digital control system
2. software companies that have experience with sharing platforms,

- Internet of Things

He is very interested to connect with Enterprise Europe Network in Estonia.

Has a contact/cooperation partner in Estonia <https://arcwood.ee/en/>

English – listening and comprehension is OK, speaking is not perfect, but promised to get by
