Company Description:

The NET4AI is a cross-industry cooperation between partners from industry, research, and academia with a strong regional connection to the state of Brandenburg and the metropolitan area Berlin-Brandenburg. Our partners stem from different sectors and are engaged in AI in various fields of research and application. The main objective of the network is to foster the transfer of knowledge and hands-on experiences between the network partners. The main objective of the network is to foster the transfer of knowledge and hands-on experiences between the network partners.

Sector: Research and knowledge transfer

Products and Services:

The NET4AI is a cooperation network that is dedicated to promoting knowledge transfer and knowledge generation between partner companies. The network provides the space for a trusting exchange and develops a variety of formats to bring partners together and initiate cooperative projects. In addition, the network provides partners with an IT platform to implement joint AI projects.

Typical Clients:

The NET4AI is set up across industries and brings together companies and research institutions that deal with the topic of artificial intelligence in various research and application contexts.
