SE Dniprodzerzhynsk steel works

The Subsidiary enterprise "Dniprodzerzhynsk steel works" is a proven leader of the Ukrainian steel industry with a wide nomenclature and serial production of the steel casting.

Our company has many years of experience in the manufacture of casting, starting in 1926.

The enterprise has mastered production of steel shot (spherical and grit) of screen size from 0,3 to 4,75 mm. The production capacity is 500-800 tons per month.

We have conducted wide modernization of existent foundry capacity and have installed a new modern manufacturing line, and now our enterprise produces of high-quality products.

Please note that the steel shot of our production fully corresponds is according to world chemical analysis and hardness index and ISO (11124-3) and SAE (J444, J827) standards.

Enterprise is the only supplier of low-carbon shot in Ukraine. Our products correspond to the quality of the world's largest manufacturers such as Winoa and Ervin Amasteel. The using of steel and cast iron fractions of our production is economically more profitable for your company, because our technological process completely excludes the presence of voids in the fraction, which greatly improves the efficiency of data processing.

In addition, our company is ready to offer a quality product at a more competitive price than European companies. We are the main supplier of shot for large Belarusian engineering companies, and have rich experience in working with EU countries. We ship our goods to Germany, Netherlands, Slovakia, Slovenia, Poland, Finland and so on.

We are interested in negotiations with other manufacturing, Machines-making companies, who would be interested in purchasing our products.

ABOUT US

The Ukrainian research and production company KB INTEL has been present on the market of vibration screening equipment since 1993 and has established itself as a dynamically developing one, focused on finding new solutions in the design of vibration devices for the dimensional classification of dry and low-moisture bulk materials and solid phase of aqueous slurries. Round high-frequency vibrating sieves KB Intel allow to classify materials that are traditionally classified as "difficult to sift": prone to agglomeration, poly- and highly dispersed, sticky, wet.

KB INTEL equipment is used in various industries: mining, processing, food, pharmaceutical, etc. and successfully competes with the equipment of the world's leading manufacturers of vibration sifting devices.

KB INTEL builds relationships with Customers on the principles of mutual benefit and maximum satisfaction of the technical and technological requirements that they place on the ordered equipment.

ZETTA GROUP Company provides services for enterprises and individuals on manufacturing of parts from metals and polymers under drawings, sketches or samples.

All machine works are performed by highly skilled shapers with a detailed understanding of the purpose and features of manufactured parts, their operational characteristics and properties defined by international standards.

We perform projects of any complexity and guarantee the high quality and efficiency of the orders performing.

Zetta Group manufactures the following parts:

- shafts
- bushes
- nuts (incl. slotted nuts)
- sprockets
- pulleys, rollers, washers,
- injection molds for food manufacturing industry
- parts for agricultural sector and other
- threaded rings
- bearing housings
- fingers, fists, pistons, necks
- protective caps
- washers
- parts for gas equipment
- parts for electrical substations

Parts of any complexity

Modern technologies and qualitative materials

The advertisement for Geometer SCOUT features a central smartphone displaying the app's interface. The app shows a map with a red polygon overlaid on a field, indicating a measured area. The interface includes fields for 'Название' (Name), 'Широта = 0' (Latitude = 0), 'Долгота = 0' (Longitude = 0), 'Высота = 0' (Height = 0), and 'Азимут = 0' (Azimuth = 0). The app title 'Geometer' is visible at the top of the screen. To the right of the smartphone, three different models of GNSS receivers are shown, connected to the phone by blue wireless signal lines. The receivers vary in size and design, including a large white and blue dome-shaped receiver and two smaller, more compact receivers. The background is a light blue gradient with faint circular patterns. The Geometer logo and 'geometer® SCOUT' are at the top left. The main headline in Russian is 'ТОЧНОЕ ИЗМЕРЕНИЕ ПЛОЩАДИ' (Accurate area measurement). Below it, two bullet points describe the device's features: 'Имеет встроенный GPS/GLONASS приемник' (Has a built-in GPS/GLONASS receiver) and 'Поддерживает работу с внешними приемниками любого уровня точности от дециметровой до сантиметровой' (Supports work with external receivers of any accuracy level from decimeter to centimeter). The website 'www.gm-scout.com' is listed vertically on the left side of the advertisement.

Ukrainian-Estonian Business Forum

“NVP Dzhereło” LLC

LLC NVP Dzhereło offers services:

- production of packaging for food packaging and other bulk materials (such as doy-pack, flat bottom bag, package with a central seam, sachets, and others to order);
- packaging of bulk products (grain and instant coffee, tea, confectionery, animal feed and others);
- manufacture of equipment for packing bulk products in finished packaging.

We have experience and cooperate in this direction with Ukrainian companies and not only for more than 20 years.

If necessary, we will send samples of ready-made packages, as well as provide information that will interest you.

Our goal is to enter the Estonian market to sell these services.
